

Cleaning up for People & the Environment.

Asbestos removal | Lead removal | Surface treatment | Dismantling | Soil remediation

Hugo and Frédéric ROSATI

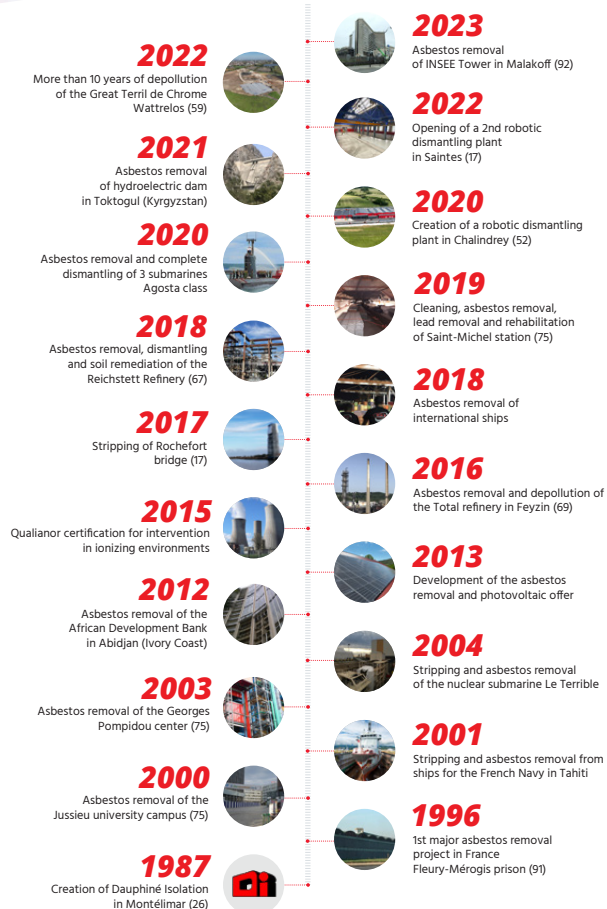

A family-owned company.

Founded in 1987 by the twins Frédéric and Rodolphe ROSATI, Dauphiné Isolation, and managed today by Hugo ROSATI, has developed with innovation and the values of a family business.

Expert in the installation of sprayed insulation since the creation of Dauphiné Isolation in 1987; it was in 1995 that we carried out our first asbestos removal project in France, while this activity is still unknown there.

A clear high-impact corporate purpose.

With a flexible structure extending across multiple several regions, we are able to provide maximum speed, flexibility and initiative to respond to all types of problematics. **As a pioneer** in pollution control, **innovation** is at the heart of our DNA. With this approach, we are able to make the difference in the quality of the service we provide.

DI Environnement has been performing decontamination and asbestos removal work. Our group specialises in the removal and treatment of all types of pollutants: asbestos, lead, refractory ceramic fibres, heavy metals, organic pollutants, etc.

Because its core business is decontamination, DI Environnement has a clear high-impact corporate purpose: **to remove materials** that are hazardous to people and the environment **in a completely safe manner**.

#Deconta

Asbestos removal, lead removal and decontamination of buildings and industries

#Surfaces

Stripping polluted surfaces and repainting

#Remediation

Surveys, engineering and soil decontamination work, waste management

#Energies

Removal of asbestos-contaminated roofs and installation of photovoltaic panels, waste methanisation

#Recycle

Equipment dismantling, decontamination and recycling

A global range of decontamination services

SPECIFIC AREAS OF INTERVENTION

CERTIFICATIONS

SOME OF OUR LOYAL CUSTOMERS

Our areas of intervention.

Industries

Sites in operation
Industrial dismantling

Our **operators' training**, our **various qualifications** and our referencing in various industrial fields enable us to meet the requirements of **different sites** with dedicated teams.

DI Environnement works on **large-scale contaminated sites and soils**, managing the problems of dismantling, decontamination and soil remediation.

Equipements

Engineering structures
Equipments

The renovation or demolition of infrastructures and equipment requires **resources and skills** that DI Environnement has succeeded in developing, particularly in **stripping, industrial painting and dismantling**.

With 6 stationary asbestos treatment facilities, including 2 modern dismantling plants (6000m²), we are able to offer **ex situ decontamination, stripping and recovery, or even repainting**, of equipments and tools containing asbestos or other pollutants.

Tailor-made equipments

Quality, Safety and Environment culture

Buildings

Major projects
Services

Backed by **our experience and resources**, we bring all our expertise and **innovation** to major projects, offering **comprehensive solutions** that include cleaning, decontamination, deconstruction and remediation work.

Our **human, material and logistical resources** enable us to reduce the time needed for large-scale, complex operations, while guaranteeing **the reliability and security** of the work entrusted to us.

Soils

Polluted sites and soils
Waste management

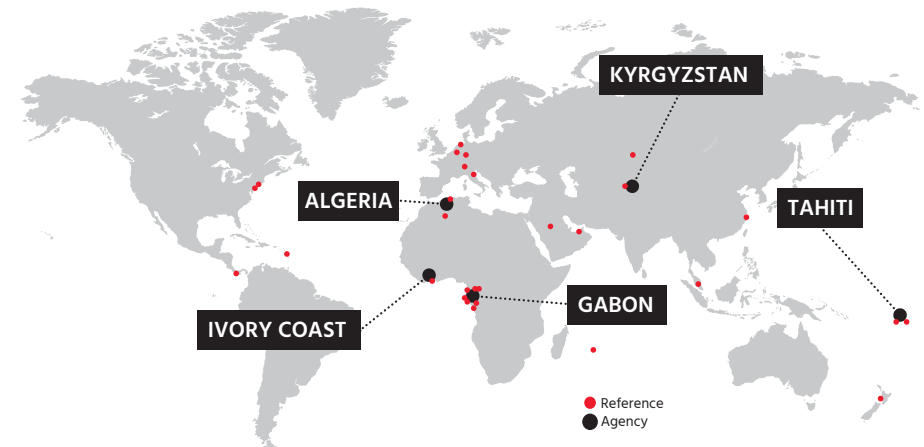

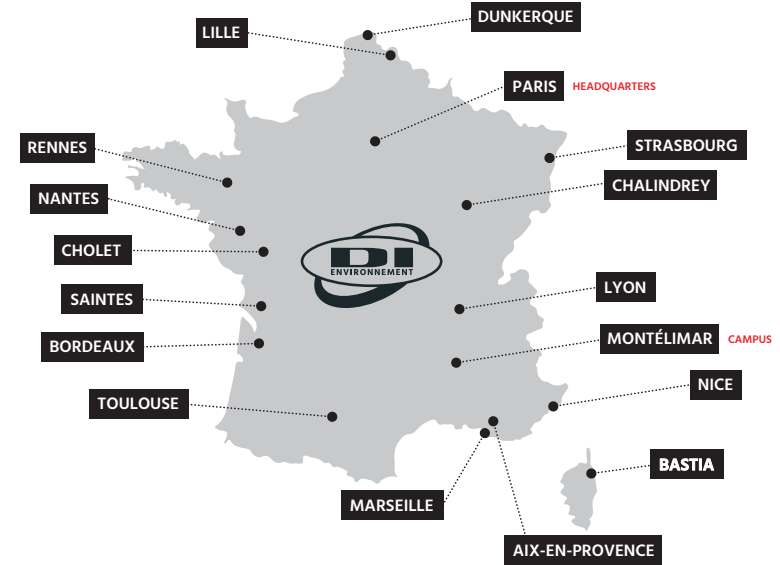

With a wide range of skills in environmental engineering, **our experts** cover the entire value chain, from characterisation and remediation of subsoil to waste management.

Nearly 30 years' experience
